/143 cont./

291 around the hip. The modesty apron with ostrich egg shell ornaments shown in Photograph 12 on the woman farthest to the left is supposed to have been traded from Makoba [the Koba?]. I have never seen a back apron.

c) Cloak of duiker or ibex hide. This always covers the buttocks.

d) Collecting bag (like the men's bag).

f) Digging stick.

Children's Clothing (see Photo. 22)

Girls: modesty apron and cloak.

[415] Boys: loincloth and cloak. A collecting bag is carried by both boys and girls.

The children receive the loincloth or modesty apron when they are about five years old.

294 [412] The articles of clothing are sewed. Holes are drilled with an iron awl, made of any little piece of iron picked up somewhere, or with a bone splinter. The sewing is done by drawing animal tendons through the holes.

123 834 When I photographed some Auin women in the nude (1), I had

> 1. I am fully aware that the following is not to be regarded as a "denial of the sense of shame." I have mentioned the matter here simply because I could not fit it in elsewhere.

to take care that all the Auin men, who incidentally, had given their consent, were removed. Several Whites and Herero, on the other hand, were allowed to remain.

G. Weapons (see Photos. 25 and 26)

411 [412] f) Digging stick, also used for beating and as a throwing club.

g) Bow and arrows.

h) Throwing lance.

804 reflective and sly facial expression is exactly the same as ours.

O. Techniques

439 511 A definite domestic industry is present. Whatever the Auin really needs, he is able to manufacture for himself. All imported objects are luxury items. I make an exception in the case of the iron lance points, but I believe that if necessary the Bushman could even do without them.

463 The beginnings of a division of labor can be seen in the fact that only certain individuals practice the smith's trade, which, incidentally, does not extend to the manufacture of lance points.

323 Pottery is unknown.

439 Pots, supposedly from the Okovangga, are to be found sporadically. The Auin, however, is unable to repair such a vessel, as by puttying.

285 Rings of braided grass are manufactured. I myself have never seen them, since they are only made of young, but no longer green grass, in other words, shortly after the rainy season.

[294] It is said that at the same time of year certain special artists braid hat-like head coverings.

The grass rings and hats have only a limited durability, for in September and October there was none left for me to see.

[415] Sieves are made of parallel grass leaves joined together by thin strings. They are used to strain food.

"Kirris" are made with attractive decorations (Fig. 12).

413 531 A root stock with a knotty end is peeled and made smooth. A kind of pyrography is practiced on it by wrapping it, leaving bare spaces, with a long strip of the wet bark that was peeled off, and then placing the entire stick in red-hot coals. The unwrapped parts burn to a black color, while the other parts remain white.

I could not learn the purpose of these decorated sticks among the Auin. They use rough, pointed sticks for digging sticks. The kirris, therefore, seem to be luxury articles.

412 Iron knives, sharpened pieces of iron, or lance points are used as tools. As an example of pyrography, see the pipe plug, page 33.

294

SKIN KAROSS, being stitched, *above*, is the !Kung's most important garment, while nuts from the *tsi* and *mongetti* trees (in pot, *below*) are chief food.
